Subject: January 15, 2020 Monitoring Station Data  
Keegan Landfill  
New Jersey Sports and Exposition Authority  
Permit Activity Number: EIP190003  
EA ID#: NEA 190001-13317

Dear Mr. Farrell and Mr. Meyer:

On January 15, 2020, NEXA, on behalf of the New Jersey Sports and Exposition Authority (NJSEA), notified the NJDEP hotline (1-877-WARNDEP) via phone that hydrogen sulfide (H<sub>2</sub>S) gas measurements in excess of 30 ppb over a 30-minute period (rolling averages) were recorded at monitoring station MS-1 at the Keegan Landfill (see Attachment 1). NJSEA made these notifications, as required under the NJDEP-approved Monitoring Action Plan and Reference #10 of the subject Permit, for raw data collected from MS-1 on January 15, 2020 (see Attachment 2). We provide discussion and analysis of the data recorded at MS-1 below.

## MONITORING STATION MS-1

The 30-minute rolling average H<sub>2</sub>S concentration at Monitoring Station MS-1 was in excess of 30 ppb for intermittent periods between 7:45 pm and 10:39 pm on January 15 (see NEXA notifications in Attachment 1 and raw data in Attachment 2). The hydrogen sulfide concentration, average wind speed and wind direction measured during the period of the exceedances are provided in Attachment 3. The average wind speed and wind direction was 0.7 mph and 207 degrees (i.e., from the south-southwest). The wind direction and MS-1 are shown on a map of the site. The nearest potential receptor is approximately 2,500 feet from the monitoring station (see Attachment 4).

January 17, 2020

Page 2

The cause of the emissions from Monitoring Station MS-1 appears to be uncontrolled emissions from the Landfill. There was no corrective action implemented in accordance with the Odor Control Plan as the exceedances occurred overnight.

The landfill gas collection and control system (GCCS) installation is complete and commenced operation on September 5, 2019. The GCCS is being continuously monitored and adjusted to ensure efficient collection of landfill gas and to address specific exceedances at the monitoring stations.

Additionally, a new permit was issued on December 23, including a second interim flare and an expansion of the GCCS on the eastern side of the Landfill. Construction of the expansion and the installation of the second interim flare commenced January 15, 2020.

Please call either of the undersigned with any questions or comments.

Sincerely,

Christine H. Stokes  
Staff Engineer  
SCS Engineers

Lisa K. Wilkinson, PE  
Project Director  
SCS Engineers
